

Investigating a new target for treatment in Prader-Willi Syndrome (PWS)

This study aims to see whether a medication already approved for use in Australia (not in PWS) may lead to an increase in brain GABA levels in people with PWS.

Participants will complete

- two clinic visits (2.5 hrs each)
- 10-day course of acamprosate
- brief cognitive assessment
- questionnaires about their mood
- two MRI scans and
- one blood draw

Location

This study will be conducted at the Charles Perkins Centre, Royal Prince Alfred Hospital (RPAH) Clinic in NSW (travel costs will be covered).

Are you eligible?

- Are you between 18 and 30 years old; and
 - Have a diagnosis of Prader-Willi Syndrome
- You may be eligible to participate.
